SHIVANI KAPOOR

Full Stack Software Engineer

Gurugram, India | **shivanikapoor5588@gmail.com** | **LinkedIn Profile** | **github.com/shivaniKapoor-Dev**

SUMMARY

Full Stack Software Engineer specializing in scalable Node.js/TypeScript backend services, MERN platforms, and responsive React frontends. Experienced in building resilient web automation pipelines, secure multi-tenant architectures, and leveraging modern AI-assisted engineering workflows to design, build, and deliver high-impact web solutions.

TECHNICAL SKILLS

Languages & Core:	JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend & UI:	React 19, Redux Toolkit, Next.js, Tailwind CSS, TanStack Table, Vite, Responsive Design
Backend & APIs:	Node.js, Express.js 5, RESTful APIs, WebSockets, Middleware Architecture, BullMQ
Databases:	MongoDB (Mongoose 9), PostgreSQL (Prisma ORM), Redis (Caching & Distributed Locks)
Security & DevOps:	JWT, Bcrypt, Role-Based Access Control (RBAC), Puppeteer Automation, Docker, Git, Postman
AI-Augmented Dev:	LLM APIs, Semantic Vector Search, Automated Test Scaffolding, Cursor & Copilot Workflows

PROFESSIONAL EXPERIENCE

Core Software Engineer (Backend & Frontend) **July 2026 – Present**
Oodles Technologies **Gurugram, India**

- Architected and delivered modular RESTful backend services and database models using Node.js, TypeScript, Express, and MongoDB/PostgreSQL.
- Engineered responsive web frontends and internal tooling dashboards with React 19, Redux Toolkit, and Tailwind CSS, ensuring sub-second load times and fluid UX.
- Built automated data collection and background scheduling pipelines using Puppeteer and Redis, automating recurring web synchronization and saving 12+ hours of manual effort per week.
- Optimized database queries and implemented distributed Redis caching, maintaining sub-80ms API response latency with strict role-based access control (RBAC).

FEATURED PROJECTS

Multivendor eCommerce Platform | MERN Stack **GitHub Repo**

- Engineered a multi-tenant marketplace platform with separate customer, vendor, and administrator dashboards using Express 5 and React.
- Enforced strict vendor data isolation via authorization middleware and prevented inventory overselling through atomic MongoDB transactions.
- Integrated Multer for multi-file product image processing and JWT with secure HTTP-only cookies.

JobScrapper TalentFlow — Upwork Job Tracker | Node.js, Puppeteer, React **GitHub Repo**

- Built an automated job discovery pipeline utilizing Puppeteer stealth automation, scraping client-rendered SPAs without bot detection.
- Implemented high-efficiency cursor-based pagination (_id & timestamp) over tens of thousands of indexed records, eliminating O(N) skip latency.
- Engineered custom start/stop cron scheduler endpoints and 24-hour rolling job recency filters.

Employee Management System (EMS) | MERN Stack **GitHub Repo**

- Developed an enterprise HR management system featuring multi-tiered Role-Based Access Control (Admin vs Employee permissions).
- Protected authentication vectors against brute-force credential stuffing using express-rate-limit sliding window thresholds.
- Implemented schema validation with express-validator and automated onboarding credentials dispatch via Nodemailer.
