SHIVANI KAPOOR

Full Stack Software Engineer

Gurugram, India | **shivanikapoor5588@gmail.com** | **LinkedIn Profile** | **github.com/shivaniKapoor-Dev**

SUMMARY

Full Stack Software Engineer with production experience in high-concurrency Node.js/TypeScript backend services, MERN full-stack platforms, and GPU-accelerated React/Pixi.js (WebGL) interfaces. Skilled in building resilient web automation pipelines, secure multi-tenant architectures, and leveraging modern AI-assisted engineering workflows to design, build, and deliver scalable web solutions.

TECHNICAL SKILLS

Languages & Core:	JavaScript (ES6+), TypeScript, HTML5, CSS3, Python, SQL
Frontend & UI:	React 19, Redux Toolkit, Next.js, Pixi.js (2D WebGL), Tailwind CSS, TanStack Table, Vite
Backend & APIs:	Node.js, Express.js 5, NestJS, RESTful APIs, WebSockets (Socket.io), BullMQ
Databases:	MongoDB (Mongoose), PostgreSQL (Prisma ORM), Redis, TimescaleDB
Security & DevOps:	JWT, Bcrypt, Role-Based Access Control (RBAC), Puppeteer Automation, Docker, Git, Postman
AI-Augmented Dev:	LLM APIs, Semantic Vector Search, Automated Test Scaffolding, Cursor & Copilot Workflows

PROFESSIONAL EXPERIENCE

Software Engineer (Full Stack) **2024 – Present**
Oodles Technologies **Gurugram, India**

- Architected and implemented high-throughput backend services and spatial map engines using Node.js, Prisma ORM, and PostgreSQL.
- Built GPU-accelerated interactive 2D map visualization editor in React 19 and Pixi.js (WebGL), rendering 500+ nodes at a steady 60 FPS.
- Implemented distributed rate-limiting and session locks with Redis, maintaining sub-80ms API response latency under concurrent traffic.
- Collaborated on telemetry ingestion pipelines using TimescaleDB continuous aggregates and HashiCorp Vault field-level encryption.

FEATURED PROJECTS

Multivendor eCommerce Platform | MERN Stack **GitHub Repo**

- Engineered a multi-tenant marketplace platform with separate customer, vendor, and administrator dashboards using Express 5 and React.
- Enforced strict vendor data isolation via authorization middleware and prevented inventory overselling through atomic MongoDB transactions.
- Integrated Multer for multi-file product image processing and JWT with secure HTTP-only cookies.

JobScrapper TalentFlow — Upwork Job Tracker | Node.js, Puppeteer, React **GitHub Repo**

- Built an automated job discovery pipeline utilizing Puppeteer stealth automation, scraping client-rendered SPAs without bot detection.
- Implemented high-efficiency cursor-based pagination (_id & timestamp) over tens of thousands of indexed records, eliminating O(N) skip latency.
- Engineered custom start/stop cron scheduler endpoints and 24-hour rolling job recency filters.

Employee Management System (EMS) | MERN Stack **GitHub Repo**

- Developed an enterprise HR management system featuring multi-tiered Role-Based Access Control (Admin vs Employee permissions).
- Protected authentication vectors against brute-force credential stuffing using express-rate-limit sliding window thresholds.
- Implemented schema validation with express-validator and automated onboarding credentials dispatch via Nodemailer.
